

My name is Fuad Jemal, and I'm a developer focusing on Android Development.

In 2015, I graduated from Addis Ababa Institute of Technology with a degree in Electrical and Computer engineering. After graduating, I started a company that built an inventory tracking system. The client side was implemented in Android. The backend, written in Go, synchronizes inventory changes from different devices with transactions that have been committed in offline mode. The system supports multiple users with different levels of access. The source of the project can be found at <https://gitlab.com/sheket>.
