My name is Fuad Jemal, and I'm a developer focusing on Android Development.

In 2014, I interned in Approbatics LLC as an iOS Development intern. During the 5 months I were there, I learnt about iOS development and then redesigned an app. I did the UX, Datastore and integration with Google's Task API.

In 2015, I graduated from Addis Ababa Institute of Technology with a degree in Electrical and Computer engineering. After graduating, I started a company that built an inventory tracking system. The client side was implemented in Android. The backend, written in GoLang, synchronizes inventory changes from different devices with transactions that have been committed in offline mode. The system supports multiple users with different levels of access. The app can be downloaded at http://sheket.strikingly.com/.
